

GLOBAL SENSORS NEW ITEM

Simple and easy to read thermometer

In general, the thermometers that are integrated with freezers or refrigerators are not the most accurate. The reason for this is that the sensor is rarely in the right place...in the middle of the storage space. Our Fridge/Freeze thermometer can be permanently hung on an storage shelf right where the products are kept...and give you an accurate temperatue.

This is not an ordinary refrigerator thermometer...it is certified by NSF, the National Sanitation Foundation. It is a non-profit organization that tests all types of instruments used in food safety and food preparation.

The construction of the unit is very robust. All stainless steel is used in the case body.

Global Sensors Fridge/Freezer Thermometer
\$5.99 each.

PS#35

Global Sensors Fridge/Freezer Thermometer

Each unit is guaranteed for 1 year for parts and workmanship.

Clip allows unit to be hung on a refrigerator rack. Does its job without getting in the way.

The seal of NSF means that the thermometer has been independently tested for temperature accuracy.

Thermometer can also be placed on its base.

Larger than normal digits are easy to read in a dark oven compartment.
